

AlgoPay

by AlgoDev Studio · Agent payment infrastructure on Algorand

Python & TS SDKs + hosted console
algodev-studio.github.io/algopay-sdk

TARGET USERS

- AI/agent builders shipping autonomous spend (Python/TS)
- Platform ops teams needing vault, API keys, policies, audit
- Algorand devs using AlgoDev Studio MCP/Raycast extending to payments

REVENUE & MONETIZATION HYPOTHESIS

- SaaS console tiers (vault, policies, audit retention, SSO)
- Transaction/proxy fee on wrapped x402 catalog & agent/pay volume (Phase 2)
- Enterprise: KMS/HSM, SLAs, gas-pool sponsorship for agent fleets
- Hypothesis: teams pay for policy+custody+observability at production scale

SCALABILITY VISION

- SDK in every agent; Redis guard counters; Postgres vault console
- Wrapped API gateway, checkout/merchants, approval queues, fee payer
- AlgoDev Studio (build) + AlgoPay (pay) = full Algorand agentic stack

GTM STRATEGY

- Developer-led open-core: PyPI algopay-sdk + npm @algodev-studio/algopay
- Cross-sell from AlgoDev Studio (55+ MCP tools) and Algorand x402 workshops
- Console land-and-expand: free tier → paid workspace / enterprise vault

WHY ALGORAND

- Fast low-fee finality for micro-payments and agent loops
- Native USDC (ASA) stablecoin settlement
- Official x402-avm agentic-commerce stack alignment
- Complements AlgoDev Studio wallet/dev tooling with payments layer
